

**تقرير أضرار السيول والأمطار والرياح في مخيمات النزوح - محافظة مأرب**  
**Damage of floods, rain and winds in the displacement camps - Ma'rib Governorate**

Situation overview

Heavy rain fell accompanied by severe storms that continued to fall for hours, accompanied by a large flow of torrential rains from the mountains and valleys of Serwah District, causing damage to hundreds of houses, including shelter and food supplies. These families live in difficult humanitarian conditions, which have resulted in severe damage. The floods have cut off roads, and large parts of the camps and gatherings of families have turned into swamps and lakes of water in all districts, as the type of shelter affected is (emergency shelter - temporary shelter - nests - containers - nets - Mud houses) that do not have the ability to withstand changes and fluctuations in the climate in the Ma'rib governorate, and if these rains and torrential flows continue, the situation may worsen and get worse.

## Recommendations

- We call upon the Camp Management and Coordination cluster to play its role, redouble efforts, direct partners, mobilize resources, coordinate the emergency response process for affected families, rehabilitate and maintain shelter, and develop treatments and means to mitigate the damages of rain and floods.
- We call upon the shelter and non-food items cluster to quickly move to the transitional shelter, since the majority of families suffer from emergency shelters that are not suitable for the governorate's climate, and most of them have gone through two years of suffering.
- We urge partners to respond quickly to cover the needs of those affected in shelter, non-food items, plastic sheets, food, protection and the rest of the needs.
- We call on the humanitarian partners to work seriously with the Executive Unit and the concerned government agencies in order to adopt a general strategy to protect the camps from floods and fire disasters.
